## Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:** (penalty regime: 0 %)

```
1  #include <stdio.h>
2  void func(int n)
3  {
4      int c=0;
5      if(n==1)
6      {
7          c++;
8          printf("*");
9          c++;
10     }
11     else
12     {
13         for(int i=1; i<=n; i++)
14         {
15             c++;
16             for(int j=1; j<=n; j++)
17             {
18                 c++;
19                 //printf("*");
20                 c++;
21                 //printf("*");
22                 c++;
23                 break;
24             }
25             c++;
26         }
27         c++;
28     }
29     printf("%d", ++c);
30 }
31 int main(){
32     int n;
33     scanf("%d", &n);
34     func(n);
35 }
36
37
```

	Input	Expected	Got	
✓	2	12	12	✓
✓	1000	5002	5002	✓
✓	143	717	717	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
